

# Ripple Drapery System

## 1. PANEL COVERAGE

Using panel coverage and the desired fullness column from chart on next page, determine hemmed width of flat panel. Using the same horizontal line, determine the number of full spaces required between factory snaps.

## 2. HEM PANELS

Cut and hem panels to required length and width. A one-inch hem is usually sufficient for heading.

## 3. ATTACH OVERLAP STIFFENER (M-344)

Starting with the overlap end of panel, sew stiffener (M-344) to top of drapery, as shown. The back edge of stiffener (M-344) should be 3 1/4" from leading edge of panel.

## 4. SEW ON SNAP TAPE (RT-425)

Count off the number of spaces required on snap tape (RT-425). This does not include spaces required after master and return. Cut tape (RT-425) so that distance from back edge of stiffener (M-344) to the first snap is 3 3/4". Put tape to stiffener (M-344) and sew tape (RT-425) along top of heading. Stitch tape (RT-425) as closely to top of heading as possible to prevent the heading from contacting the track during operation. The spacing for a double needle head should be 3/4".

## 5. HANG DRAPERIES

Place stiffener (M-344) onto arm of master carrier (M-1200/M-1300); grommet will line up with threaded hole in arm. Fasten baton adapter (M-341-C) with shoulder screw (M-341-S). Join snaps on panel headings with carrier snaps (R-80/R-100/R-200/R-800). Insert pin-on hook to return drapery to wall.

Tape & Hem Guide
