

Introducing Our Stainless Steel Hardware Line!

Many high end fabrics associated with and specified by the hospitality industry are being imported from the Mediterranean area. All hotel window treatments in the U.S.A. must meet or exceed N.F.P.A. 701 specifications for fire retardancy.

In an attempt to accomplish this, the Mediterranean area and other parts of Europe have elected to treat their fabrics using a strong saline solution as a chemical agent to satisfy this requirement. Unfortunately, in many cases, this treatment is removing the protective plating from the hardware that comes in close contact with the fabric.

As a solution to this ever growing and costly problem, R-Equal, LLC. is introducing our stainless steel hardware line. Being leaders in our industry, we have elected to eliminate the possibility of the damaging effects these treated fabrics cause when in close proximity to plated hardware. Therefore, R-Equal, LLC. is now providing the following the following items in stainless steel in addition to plated: master carriers and master carrier arms and the following items are offered exclusively in stainless steel: D-Rings, snaps, and completed baton hardware. Stainless steel stiffener grommets are available on special order; allow 8 weeks for delivery.
